                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360
                                                                                                                                                                                                                                                                       The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

Determination of whether compound is useful for prostate cancer treatment comprises measuring expression level of specific nucleic acid sequence in prostate cancer cell sample in the presence and absence of compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            be used to treat prostate cancer and comprises measuring the expression and absence of the compound. Determining whether a compound can be used to treat prostate cancer cell sample in the presence and absence of the compound. Determining whether a compound can be used to treat prostate cancer complises identifying the compound as useful for prostate cancer treatment when the expression level of the nucleic acid in the presence of the compound. Prostate cancer is usually tretaed by androgen withdrawal, by castration or through the use of an anti-androgenic drug. Bicalutamide (casodex) is one such anti-androgenic compound. The determination whether a selected compound, e.g. an anti-androgenic compound or testosterone, can be used to treat the prostate androgenic compound appreciate basis. The sequence presented is an expressed sequence tag (BST) which is more highly expressed in testosterone treated prostate cancer cells than the untreated cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid rebuxeemia, Alzheimer's disease, Alzheilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for examination of periodontal disease in which genetic polymorphisms are detected in one or more of 51 genes. The method is useful for examination, diagnosis and assessment of periodontal disease or risk of periodontal disease and the risk of its progression to severe, aggressive and chronic periodontal disease. The present sequence represents a polymorphic gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Single nucleotide polymorphisms associated with periodontal disease for examination and assessment of susceptibility to periodontal disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GTGGCTTATCAGATAAAACAAGTGAGTCATGCCACAGGATGTCTATAAGCCCATTGATT

The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (1) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (GAP); (iii) for screening of bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma arus; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (ix) as a biochip; (x) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of servinema including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 211257 BP; 55148 A; 47354 C; 46616 G; 57484 T; 0 U; 4655 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   57794 CGGTGGTGATGGGCATGGGTCCTAGAGACAGCAGGCATGGGAATCAGCTCACTCCCACTT

The invention relates to human polymucleotides (AA179941-AA193841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell prodiferation or cell differentiation or which may induce production of other cytokines in other cell propulations. The polymucleotides and polymeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     201 AATGGCAAAAATGGGCTTTGTTTAACGACAAATGAACTTTAATGCATGTATTTAAGAAAC 142
                                                                                                                                                                                                                                                                                                                                           Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               261 CTTICCAGGALTCCTTTTTTTTTTTTTTTTAAAAGCCCCTTTTTCCTAAATTTAGGGATTT 202

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

/clone lib="Diagrap was constructed according Site 2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Soares, Genome Research, 6:791-806, Bonaldo, Lennon and Coares of Agranach on a 1% agarces primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with both I mand then cloned directionally into pyX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is GATAAGGCCA. Tissue was provided by Mary Hendrix."

/note="Vector: pBluegcript II SK+; Site 1: EcoHI; Site 2:
Xho1; The cDNA library was constructed by Keliang Tang,
and Robert Cole at Washington University. cDNA was
synthesized from Poly(A) + mRNA using an oligo-d(T) primer
containing a Xho1 site. Following second strand synthesis,
EcoRI adapters were ligated to the cDNA, and products were
size-selected on sephacryl S500. The cDNA were
directionally cloned into the EcoRI/Xho1 prepared
pBluescript II SK+ vector, and electroporated into
ElectroTen Blue cells (Stratagene). The library may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tigr-ges-dog-17000327371506 Dog Library Canis familiaris genomic, genomic survey sequence.

This is a long-transcript enriched cDNA library (Ref.
Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total
RNAs were obtained from Dr. Kenneth R. Boheler (National
Institute on Aging, USA). ES cells were cultured without
feeder cells in the presence of LIF and BRL-conditioned
media. Double-stranded cDNAs were synthesized with an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Bukaryota; Metazoa; Rodentia; Sciurognathi; Muridae; Murinae; Mus. 1 (bases 1 to 637). /note="Organ: heads; Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: Not1; This normalized library was constructed_from 1 million independent clones. cDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand synthesis reaction. Following this first strand reaction, double-stranded cDNA was blunted, ligated to NotI adapters, digested with EcoRI; size-selected, and cloned into the NotI and EcoRI compatible sites of a custom medified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridization was used."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           End-sequence profiling: Sequence-based analysis of aberrant genomes

Sequence 12725, Application US/09949016

Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CLOOL307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/231,768
PRIOR FILING DATE: 2000-10-03
PRIOR PILING DATE: 2000-10-03
PRIOR APPLICATION NUMBER: 60/231,498
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 207012
SOFFWARE: PRESERQ for Windows Version 4.0
                                                                                                                                                       3176 TATCTGCTGGCGCTGAAATTCTCTCAGGACAGCTCAGCCCTGCTTTCCAGAAGATGAGAG 3117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3176 TATCTGCTGGAGAGAATTCTCTCAGGACAGCTCAGCCCTGCTTTCCAGAAGATGAGAG 3117
